Mainstar Enhances Recovery Management

New release delivers tighter integration and more centralized recovery.

Mainstar Software Corporation, an industry-leading provider of data access solutions in the z/OS arena, is announcing a new release of Backup & Recovery Manager Suite, featuring a tighter integration of ASAP, All/Star, and ABARS Manager into a comprehensive business resiliency solution for ensuring critical data sets can be recoverable from any type of outage.

To achieve business resiliency in the mainframe environment, installations must ensure that the right data is backed up and ready for recovery. Traditionally, this requires several difficult and time-consuming tasks: locating the application data along with its interdependencies, determining which data sets are critical to business survival, and comparing this data to existing backups. Because IT resources are limited and these processes are resource-intensive, most organizations simply aren't sure whether they have the data they need for a successful recovery.

Now, with a single install, you can discover application data, implement centralized management of backup and recovery, find out what wasn't backed up, and prove compliance with data retention requirements and regulations. In addition to simplifying the installation process, Backup & Recovery Manager Suite 6.01 supports more backup products, so centralized recovery is easier than ever. By replacing manual tasks with automation, you can decrease the risk of missing data needed for local or disaster recovery while optimizing your hardware and personnel resources.

“With increasing demands for continuous data access, there is less tolerance for downtime,” said Doug Bryan, Mainstar's Vice President of Sales and Marketing. “Knowing that the business can recover from any type of outage is not a luxury; it's a necessity.”

About Mainstar

Mainstar Software Corporation, founded in 1978, provides innovative data access solutions for z/OS environments throughout the U.S.A., Canada, Europe, Australia, and the Asia-Pacific region. We offer outstanding products and services, backed by an extraordinary depth of knowledge and a focus for over 25 years on MVS and large system installations. For more information, please visit www.mainstar.com, e-mail info@mainstar.com, or call (425) 455-3589.
